

CryptoGuard Advanced Security CAS completes Cartesian's Farncombe Security Audit®

Motala Sweden, 25 November, 2019

CryptoGuard, a global provider of CAS/DRM content protection and IPTV/OTT solutions, announces that its Advanced Security CAS has successfully completed a rigorous review by Cartesian, a specialist in security auditing service.

Cartesian's Farncombe Security Audit® is an independent industry-recognized methodology for reviewing security system requirements meeting the major Hollywood studios rigorous standards. The audit covers security system implementations, including materials handling, business processes, system architecture, device security and end-to-end implementation.

"We are excited to have successfully completed the Farncombe Security Audit®" - said Vidar Sandvik, Director of Products & Partners at CryptoGuard. "The audit demonstrates that our security solutions meet the strict industry standards required by content and rights owners. Content owners interested in learning more about the results of the audit can request further information from CryptoGuard."

CryptoGuard Advanced Security CAS is a scalable and feature-rich solution offering low entry cost and a pay-as-you-grow business model for operators of all sizes. The CAS includes an integrated Subscriber Management System (SMS) with ability of remote management allowing simple setup and maintenance. Both cardless and card-based CAS clients are based on state-of-the-art SoC and smartcard security processor, meeting security requirements for up to HD premium content. CryptoGuard Advanced Security CAS solution can be extended with CryptoGuard DRM and OTT for anywhere, any screen viewing experience.

About Cartesian

Cartesian is a specialist provider of consulting services and managed solutions to leaders in the global communications, technology and digital media industries. Cartesian's content security services include anti-piracy investigations services, watermark robustness testing, password sharing analysis, and the Farncombe Security Audit® – a standardised methodology for reviewing security system implementations, including materials handling, business processes, system architecture, device security, governance and end-to-end implementation. Cartesian's clients include TV broadcasters, content distributors, CAS and DRM vendors, and network operators. For more information, visit www.cartesian.com.
